Addressable Device Programmer CF800PROG

CF800PROG programmer, back

CF800PROG addressable device programmer

Overview

The CF800PROG programmer is a versatile tool to aid the installation, commissioning, maintenance and servicing of current addressable devices and fire alarm systems.

This unit is light, robust and easy to operate using a user friendly menu structure on 2 x 40 character LCD display. It is powered from a single PP3 size, heavy duty battery or an external supply.

The programmer has a built in addressable base as well as two external terminals for use with all other current addressable ancillary devices.

Features

- Reads addresses
- Writes addresses
- Reads analogue values
- Tests devices
- Deletes addresses
- Programmes the 3 heat settings
